Vulnerable Pupil & SAFE Task-Force Portal

Sharing critical insight between Schools, Local Authority Teams and Partner Agencies to identify and protect vulnerable pupils

Described as a 'Game changer' by schools in areas such as Portsmouth and Liverpool. Authorities, schools, and other partners, are sharing risk indicators to identify and protect the most vulnerable pupils from crime and gang exploitation

Based on the Sentinel Data Integration Platform, risk indicators from the police, school attendance / behaviour data and children's social services are automatically combined and profiled, to be shared and updated across any number of secure portals

Key features and benefits include:

> **Dashboards**: Specifically designed and configured in collaboration with local authorities and their schools, to display all critical information needed to identify the most vulnerable

> **Multiple partners**: Create portals for any number of partners to work collaboratively, such as junior and senior schools (to manage new intake), local authorities, police, and children's centres

> **Control access to detailed information:** Provide detailed drill-down screens for those teams who need to see some or all background information on the pupil, their network and their family

> **Automated alerts:** Setup on-screen / email / SMS alerts based on risk threshold or critical events

> **'Soft' intelligence:** Include information such as Police cautions, behavioural & teacher notes, and uploaded documents to support more informed decision making

> **Chronology:** Build up a history of events and interventions to understand trend and progress

> **Data can be automatically integrated to other Sentinel products:** Choose to share data between Family Hub and Supporting Families teams, aligning services and sharing insight

> **Extracts & reports for govt submissions:** All current / future national requirements will be met

> **Highly secure**: Created in accordance with Data Protection by Design principles and compliant with our Cyber Essential Plus and ISO27001 standards; all data is encrypted, all access points have strong cyber defences and resilience, user access requires dual-factor authentication and there is a full audit trial of user activity
