

Driving enhanced delivery through a greater understanding of people

Fragmented data has a dramatic effect on local authorities, the NHS, police and other agencies as they seek to work collaboratively and form a complete picture of the individuals they serve.

Sentinel’s technology overcomes this by easily linking existing data from multiple sources to provide a holistic view representing the most complete, accurate and timely information known about an individual.

By providing a greater understanding of people, our tailored Single View solutions are able to help organisations work together in order to target support and resources where they are needed.

Applications include the identifying and caring for vulnerable adults and safeguarding children, improved crime detection and integrated healthcare.

Further features and benefits include:

- ▶ A joined-up approach to service delivery through effective and secure collaboration between external agencies and internal teams
- ▶ Less time finding out what is already known and more time dealing with cases
- ▶ Potential issues proactively highlighted at an early stage
- ▶ Highlighting links and associations – such as how people may be connected through family ties or shared history such as gang membership or youth offending
- ▶ User-friendly technology which is easy to implement with views that can be tailored to meet data requirements of specific teams including extra protection for sensitive data
- ▶ A comprehensive chronology to the records that make up a person’s history

Clients include London Borough of Tower Hamlets which is using Sentinel’s solution to provide a single view of citizen solution for all people receiving services.
